## SUMMARY

Pre-final year Computer Science student specializing in Cybersecurity and Full-Stack Development. Skilled in Java, Python, JavaScript, TypeScript, SQL, MERN Stack, REST APIs, and secure web application development. Experienced in building AI-powered applications, vulnerability assessment tools, and scalable web platforms. Strong foundation in Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, and secure coding practices.

## EDUCATION

|                                                                                                                                                                                                                                     |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Bachelor of Technology in Computer Science,</b><br>SRM Institute of Science and Technology, Chennai<br><b>CGPA : 8.66</b><br>Relevant Coursework: Data Structures and Algorithms,<br>Essentials in Cloud and DevOps, Biometrics. | 2023 - 2027 |

AWS SimuLearn Generative AI | AWS Cloud Computing Essentials | Tata Cyber Security Analyst Job Simulation | Software Architecture Job Simulation | Data Visualization: Empowering Business with Effective Insights

## PROJECTS

**AI RESUMANY:** Developed an AI resume analyzer using Streamlit, Python, and MySQL, reducing manual resume screening time. Implemented resume parsing and keyword extraction, enhancing recruitment efficiency.

**SecMan:** Designed a full-stack web-based vulnerability assessment tool using Node.js and Express to analyse security risks in web applications. Implemented modules for port scanning, SSL validation, DNS reconnaissance, and header analysis, along with automated report generation. Integrated security best practices, such as rate limiting and HTTP header protection, to enhance application resilience.

**Carpooling / Ride Sharing:** Deployed a web-based carpooling platform that enables users to create, join, and manage shared rides for efficient and cost-effective travel. Implemented real-time ride matching, user authentication, and route-based search to enhance usability. Focused on scalable backend design and seamless user experience using modern web technologies.

**CODTIME:** Developed CODTIME, a premium real-time collaborative IDE built with Next.js, TypeScript, and Socket.io that enables seamless multi-user code editing with sub-50ms latency. The platform integrates the Monaco Editor, an interactive browser-based terminal using Xterm.js, and a Node.js backend connected to the Piston API to support zero-configuration cloud compilation and runtime execution for over 10 programming languages.

## ADDITIONAL INFORMATION

- Strong interest in building scalable frontend systems and interactive UI workflows
- Actively developing projects to improve frontend architecture and system design skills
- Comfortable working in fast-paced, product-focused environments
